

### ThreatLocker Automation Implementation

This revised process for automating ThreatLocker will make versioning and development more manageable in addition to reducing the scope of resource locations needed to function. The **ThreatLocker Status** custom field is an endpoint variable that includes the following options:  
**\*\* Unknown \* Is Installed \* Not Installed \* Add Device \* Remove Device \* Exclude Device \* Override \*\***

In addition, there are a series of variables within Asio RMM used for tracking the status of ThreatLockers deployment at any given location; included are the following with their default assignments:
